DETAILED ACTION

1. In view of the papers filed March 9, 2006, it has been found that this nonprovisional application, as filed, through error and without deceptive intent, improperly set forth the inventorship, and accordingly, this application has been corrected in compliance with 37 CFR 1.48(a). The inventorship of this application has been changed by adding Gokhan Hotamisligil.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of Office records to reflect the inventorship as corrected.

2. Prosecution on the merits of this application is reopened on claims 1-2, 5-9, 11 and 14 are considered unpatentable for the reasons indicated below:

Claim Rejections 35 U.S.C. 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-2, 5-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Meguro et al. (US 4,687,777) as evidenced by Sandouk et al.

5. Claims are directed to a method of treating diabetes comprising administering to a mammalian species in need of the treatment an aP2 inhibitor, wherein the aP2 inhibitor includes

Art Unit: 1617

an oxazole or analogues ring. As understood, the analogues ring would include any five-membered hetero-rings, including thiazole. See, claims 14 herein.

6. Meguro et al. teaches a method of treating diabetes comprising administering to the patient a thiazolinedione derivative, or its salt, particularly, piolitazone. See, particularly, the abstract, col. 1, line 40 to col. 2, line 63, and the claims. The method is particularly suitable for type II diabetes. Col. 6, lines 11-60. Sandouk et al. disclosed that pioglitazone, as a known anti-diabetes agent, affect the aP2. See, particularly, the abstract. Since piolitazone has an oxazole analogues ring and have the same utility herein, i.e., treating diabetes, and has affect aP2. It is reasonably expected that piolitazone be an aP2 inhibitor. Note, "When the PTO shows a sound basis for believing that the products of the applicant and the prior art are the same, the applicant has the burden of showing that they are not." In re Spada, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990). The burden is shift to applicants for proof that piolitazone is actually not an aP2 inhibitor.
